

Using Implementation Science in Practice

Monday 16th and Tuesday 17th April 2018

Room 02 EFH01, Engineering for Health Building University of Surrey

This two day seminar is for healthcare professionals, managers, commissioners, researchers and policy makers in both the public and private sector who want to make effective use of evidence based treatment and care.

The seminar will be structured around four main themes:

- | | |
|---|---|
| 1) Introduction to implementation science | The seminar includes lectures, practice examples and facilitated small group work to support participants to use implementation science more effectively in practice. |
| 2) Pre-implementation planning | |
| 3) Implementing your project | |
| 4) Post implementation; adoption, spread and sustainability | |

The seminar is led by international experts in the field of implementation science including Dr Brian Mittman, Senior Research Scientist at the Kaiser Permanente Southern California Department of Research, US, Professor Sharon Straus, Chair in Knowledge Translation and Quality of Care, Department of Medicine, University of Toronto, Carl May, Professor of Healthcare Innovation, University of Southampton and Dr Siw Calfjord, Linköping University, Sweden.
